AUTEFA Solutions: Tailored Automation Solutions for the Beverage and Packaging Industry

AUTEFA Solutions has been developing and supplying turnkey automation systems and special machines for more than 60 years. The company specializes in fully automated systems that cover the entire material flow, from incoming goods through production machines to the storage of products in dedicated intermediate storage facilities. A particular focus is on innovative special systems tailored to the specific needs of the customer.

AUTEFA Solutions designs and implements complex integrated systems and intralogistics solutions for a variety of industries, including the plastic container industry, the food, dairy and beverage industries, and non-food applications. In addition, the company offers comprehensive service and spare parts for CERTANT palletizers, depalletizers and packers of the former Certus Maschinenbau GmbH in Friedberg. Existing CERTUS systems are modernized and expanded with new machines from AUTEFA Solutions to meet current market requirements.

As a turnkey supplier, AUTEFA Solutions takes over the complete planning and implementation of filling and packaging systems. The company's success is based on the development of innovative solutions for specific applications, which is a main focus of its activities. AUTEFA Solutions plans, implements and commissions complex systems worldwide.

The product range includes new glass sweep-off devices, set packers, fully automatic mixing systems, unit load palletizers, as well as palletizing and depalletizing systems. Particularly noteworthy are the patented VacuGrip" vacuum layer gripper and special palletizers for bottle manufacturers. With many years of experience, AUTEFA Solutions offers solutions for almost every bottle shape and size.

An example of the company's innovation is the new Certant R glass sweep-off device. It can be used universally for all types of bottles and ensures safe sweeping regardless of the shape of the bottles, cans or beverage cartons. The machine also offers flexibility with the ability to safely sweep carton trays. While many manufacturers rely on pickers with tube grippers, AUTEFA Solutions uses a technique where cartons are torn open and secured in the sweep-off direction to prevent twisting of the layer. This function can be added modularly according to customer requirements.

AUTEFA Solutions systems are designed for both breweries and other beverage producers, such as soft drink manufacturers and wineries. While the basic machine remains the same, AUTEFA Solutions responds to the different needs of the customers, especially in case of frequent product and format changes. The sweep-off machines from AUTEFA Solutions are designed for an output range of 6,000 to 40,000 bottles per hour and are also suitable for special lines such as trays with foil.

Another highlight of the new Certant R glass sweep-off machine is the "no broken glass" device, which significantly reduces glass breakage. The bottles are secured during each lifting and sweeping movement and remain fixed until the sweep-off head is positioned over the bottle neck. This minimizes the risk of bottles falling before or during the sweep-off process.

Whether modernizing, expanding, or adapting to new bottle formats, the new Certant R glass sweep-off device optimizes production and remains flexible. New bottle formats can be easily processed by creating a new recipe, and for larger changes, such as additional depalletizing and unpacking of crates, the changeover head can be adapted. Reference customers in the beverage industry have achieved a return on investment (ROI) of less than two years through savings on maintenance contracts, fewer repairs, and reduced downtime.

With more than six decades of experience, AUTEFA Solutions stands for innovative, efficient and customized automation solutions that meet the highest standards worldwide.
