

INTRA-POWER WRAP

Fully Automatic Packing Solution

» **INTRA-POWER WRAP**
» *Fully Automatic Packing Solution*

Intra-Power Wrap, a fully automatic packing solution, enables the reliable protection of fibers against any kind of contamination during transport or intermediate storage due to a consistently high wrapping quality. Intra-Power Wrap is a solution for the increasing demands regarding baling press technology caused by the new high- capacity fiber lines.

The packing solution unit is integrated in AUTEFAs baling press Lift-Box Compact Double Box Balers or Nonstop-Ultra Single Box Balers.

SPECIAL FEATURES:

- 5 – 62 bales/h
- The extreme high capacity can be realised due to a belly wrap process with 2 film coils moving parallel to the bale
- Welding of the belly wrap at 2 sides:
 - With ultra-sonic for PP-woven
 - With heating bars for PE-film

- Can be integrated in Lift-Box-Compact or Nonstop-Ultra balers as full automatic packing
- 4 sheet packing (top and bottom sheet wrapped with 2 welded belly wrap pieces)
- Welded belly wrap
- Suitable for PE-film, PP-woven and PE-straps
- Welding connection by heating system (temperature controlled)
- No dust or abrasion of the strapping belts due to the heat melt technology

SPECIFIC ADVANTAGES:

- Internal packing avoids fiber contamination in multi-color production lines
- The packing inside the main-press assures the optimum bale shape. The packing will be done under pressure of the main-press.

PERFECT WELDING CONNECTION
